

# jQuery/PHP Forms

Prepared for: Web Design 2, Fall 2016

Prepared by: Chase Toy

October 20, 2016

# PROJECT SUMMARY

## **Objective**

The purpose of this project is to design and implement various forms in different languages such as the following:

1. jQuery/JavaScript
2. PHP
3. HTML

I will also showcase the pros and cons of each of these different methods and explain situations where some forms will work better than others depending on the situation.

## **Goals**

The Goal(s) is/are to educate the class about forms as a whole and how you can utilize them and how they can be vital to the success of a website. I will also discuss the method for testing the forms and how they can be included in your very own website.

## **Solution**

I will host the individual files containing the code to make the forms on my personal github account <http://www.github.com/chasetoy> and will display them on screen and walkthrough them and explain how they work and what was easy or hard about coding each one of them.

## **Project Outline**

Part of the Presentation will be given on my Wordpress website, part will be on <http://www.github.com/chasetoy> , some will be a live demo and then I may do a .js style slide show as well.

- Display the Code for the Forms on github
- Walk through the lines of code and explain, in simpler terms, what each line/section does
- Open the working forms up and give a demonstration of the working status of the forms
- Answer Questions at the End
